

Your Single Source Solution

Your Aircraft, Our Expertise, One Single-Source Solutions Provider

Your BBJ is unique, and so are your requirements. At Associated Air Center, our expertise in BBJ MRO and completions has taught us that one size does not fit all when it comes to creating maintenance programs. We listen to our customers, and by applying our experience and resources, we guarantee that you'll receive the best solutions for your particular operation.

Executive transport isn't a side-line for Associated Air Center, it's what we do. As the only authorized non-airline BBJ service provider capable of major airframe and completion services and engine MRO, our breadth of dedicated BBJ service offerings is unmatched in the industry.

One Company, Two Great Brands

When choosing Associated Air Center, you get the unique benefit of working with two industry leaders, not just one. Our parent company, StandardAero, is an OEM-Authorized and Independent Engine MRO provider that offers dedicated CFM56-7B services. Together, you'll experience Nose-To-Tail™ MRO capabilities and maintenance programs that are unsurpassed in the industry. Powered by AAC's legacy of great service, completions and paint, and StandardAero's long-term support of business jet engines, rely on us to be your single-source solutions provider.

Customized Maintenance Programs that Reduce Risk of AOG

We'll work together with you to develop a maintenance program that fits your needs, and schedule. Preventative maintenance is a smart move, and a CFM56-7B Low Utilization Turbine Engine (LUTE) Inspection by StandardAero is an excellent place to start.

In addition to our comprehensive LUTE Inspection Program, we offer a full CFM56-7B service package that includes:

- Engine Maintenance, Repair, Overhaul & Test
- Shipping and logistics
- Lease engine support
- On-wing removal and reinstallation
- Global field service support
- On-site problem solving and troubleshooting
- Engine Reliability
- Comprehensive warranty
- Component Repair and Overhaul

Adding Value by Eliminating the Need for Costly Replacement Parts

In order to bring you the highest value and the quickest turnaround, our repair development engineers are continuously working on innovative solutions. From its inception nearly a decade ago, StandardAero's Components business has dedicated its R&D and Tooling resources to develop extensive component repair capabilities. To that end, we have developed repairs for more than 750 CFM56-7B components.

Find Out More

Contact us today and find out how a customized maintenance program from Associated Air Center/StandardAero can keep you on schedule and in the air. Visit us online at www.associated.aero or www.standardaero.com/engines.
